

Powered by a digitally controlled servo system, the SignPal Sable produces eye-catching graphics with up to 15.7 ips (400mm/sec) cutting speed, 250g cutting force and three meters (9.84 feet) of tracking ability. Sable is the best choice for beginners and provides sign makers with optimum speed, superior quality, solid reliability and unmatched value.

Features

Plotting and vinyl cutting

Sable is a versatile machine with the ability to plot and cut without having to alter the plotter's mechanical configuration. To cut, simply install a blade holder; to plot, simply install the fiber tip pen required for the job.

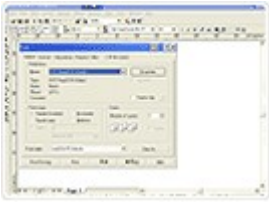

Tri-port connectivity

Sable supports tri-port connectivity with USB, serial and parallel ports. USB port provides faster and data transmission between the computer and Sable. Tri-port connectivity provides sign makers with great flexibility for transmission data.

Handy grooved cut-off tool

This handy and innovative design helps you cut off a finished job in a straight line, reducing vinyl waste.

Windows Drivers

Sable includes a Windows driver that allows sign makers to edit signs from CorelDraw and output directly to Sable. It is very simple and easy to make signs with Sable.

Friendly operation

The control panel of Sable is simple to use, especial for non-technical sign makers. Besides, Sable also comes with a VLCD software, which will help sign makers operate Bobcat as easy as their home appliances.

Media handling system

The media handling system is fully adjustable. It handles media on standard cores and resolves media drifting and alignment problems to guarantee better tracking.
